

How_I_Met_Ur.py

Those were the times of being a noob. A lot of energy within. When I started with it, I had this passion for learning everything programming language I heard of. Every technique in the world. Softwares, hardwares, websites, mobile apps. I was immature and swayed towards every second thing that hit me. No stability. Now things are much different. I still have a lot to learn. Many mistakes stored ahead. The hunger to learn has only increased. However, now there is more focus. I know what aspects I wanna master on instead off being a jack(ass) of all. This focus I blabber about is not something I realized on my own. It was a lot of people, seniors, mentors, some providing help, others providing skull-fucking complications , but all fascinating and inspiring.

Now I mostly work with Python. It is a general purpose programming language with a lot of libraries, detailed documentation and great online forums. I specify more on data processing and visualization. I could go on writing pages more on it but it would be too long and since you haven't considered this boring already and left I intend to keep it that way.

So where was I??? Python! Back then when I was trying to make every programming language second to my mother tongue my seniors Rohit Dai and Chandan Dai showed me a few tricks on Python. Hmmm. Interesting. Then they invited me to the first Python Developers Meet Nepal. A developers meet is where a lot of programmers and developers gather and one of em speaks on a detailed aspect of the language or its ways. Ok so being a newbie back then I didn't expect to understand a shit they would talk about over there. But then what do I have to lose??? In the end it turned out better than I had expected. They didn't talk about millions of lines of codes or techniques to screw a system. It was mostly about programming ethics. We are problem solvers and innovators and we should strive for not just coding it but doing it beautifully and efficiently. This was inspiring. I'm gonna attend every Python meetup they're gonna stab at the calender.

SHIT! The second Python Meetup was everything the first wasn't. They specifically talked about millions of lines of codes and techniques to screw a system. Things flew over my head. Admittedly I wasn't ready yet for that kinda talk. It was intimidating that I had a lot more to learn but then guys coding is intimidating at times. Its when you go past that when all the fun starts.

Now finally getting to business, IT MEET 2014 presents KU Python Developers Meet. A place where Python programmers of various level of expertise from allover the country will come under one roof (ie. if we get a hall room). Here I take the liberty to state this is the first time KU is hosting a Python Developers Meet and the event is expected to be the grandest compared to its history.(I may be blurry on the facts. Plz dont tryin kill me if im wrong) Me as a Python Programmer who has learned so much from people around rather than a textbook of tutorial feel this is an opportunity as well as a responsibility. An opportunity for participants who will get to learn and share from the bests in the industry. Shape their own handwriting on the lines the experts write. On the other hand a responsibility for the speakers to feed and encourage many attendees.

So the stage is set. Hopes are high. Attendees. Be prepared. Good stuffs are about to be thrown in your face. Its upon you now to realize what parts of those suits you best. Speakers. Be prepared. I've vouched for you guys here. Speak so that everybody from a 'hello world' guy to 'hello world im a hacker' guy could learn and be inspired. Dozens of enthusiast, learners, hackers, professionals are gonna 'Meetup' at the same room. One of em is gonna be me hoping it would be for me the newest best Python Developers Meet.
